

## GW-7473

Modbus Slave to Ethernet/IP Scanner Gateway

### Features

- 10/100 Base-TX Ethernet, RJ-45 x1
- Redundant power inputs: PoE (IEEE 802.3af, Class 1) and DC jack
- Automatically RS-485 direction control
- Tiny form-factor and low power consumption

### Introduction

The GW-7473 (Modbus TCP/RTU Slave to Ethernet/IP Scanner Gateway) is helpful for data-exchanging between Modbus Master and Ethernet/IP adapter. It reads the register data from the Ethernet/IP adapter and publishes these data to the input register data of the Modbus TCP client as well as Modbus RTU Master. The output data transmitted by the Modbus TCP/RTU Master are updated to the register data of Ethernet/IP adapter. In order to save the installation space, the GW-7473 is also offered in an amazing tiny form-factor that makes it easy to install in anywhere.

### Modbus Features

- Modbus Protocol: Modbus TCP Server/RTU Slave protocols
